Batteriol. 185:2330-2337(2003).

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).
-!- CATALYNIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).
-!- COPACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By similarity).
-!- SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.

"Periplasmic superoxide disamutase protects Salmonella from products of phagocyte NADPH-oxidase and nitric oxide synthase.";

Proc. Natl. Acad. Sci. U.S.A. 94:13997-14001(1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             June. Mol. Biol. 302:465-478(2000).

-1- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to bloogical systems.

-1- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).

-1- COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit.

-1- SUBGELLULAR LOCATION: Periplasmic.

-1- SUBCELLANBOUS: Encoded by a cryptic bacteriophage.

-1- SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A.

                                                                                                                                    70
                                                                                                                                                        -i-FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).
-i-CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-i-COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By similarity).
-i-SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.

O157:H7 and genomic comparison with a laboratory strain K-12.";

DNA Res. 8:11-22(2001).

-: FUNCTION: Destroys radicals which are normally produced within the

cells and which are toxic to biological systems (By similarity).

-: CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

-: COPACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MKIKLFFVTSIVTISLLTSITSVVLACSVTSE----VHMIDDNGIKOSIGTVTFTDTDKG

I. Nature 409:529-533(2001).

I. Calls and which are toxic to biological systems (By similarity).

C.I. CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

SINGLE ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

SINGLE ACTIVITY: 2 superoxide and 1 zinc ion per subunit (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     57 LQIKTDLKGLPAGEHGFHIHEGGSCGPAEHDGHLTAGLQAHGHYDPDKTGKHEGPLG-NG 115

Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Destroys radicals which are normally produced within th cells and which are toxic to biological systems (By similarity).
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!- COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By
             c similarity).

C -:-SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.

Bacteriol. 173:7449-7457 (1991).
-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
-!- FUNCTION: May confer survival advantage by accelerating dismutation of superoxide of environmental origin to hydrogen peroxide, disruptive to the normal mucociliary clearance process in the host.
                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps.

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!- COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By
                                                                                                                                                        similarity).
-!- SUBUNT: Honodimer (By similarity).
-!- SUBCELLULAR LOCATION: Periplasmic (By similarity).
-!- SUMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

Cu, Zn superoxide dismutase structure from a microbial pathogen establishes a class with a conserved dimer interface.",
J. Mol. Biol. 296:145-153(2000).
I-FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
I-CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
I-COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit.
I-SUBUNIT: Homodaimer.
I-SUBUNIT: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                       [1] -

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
